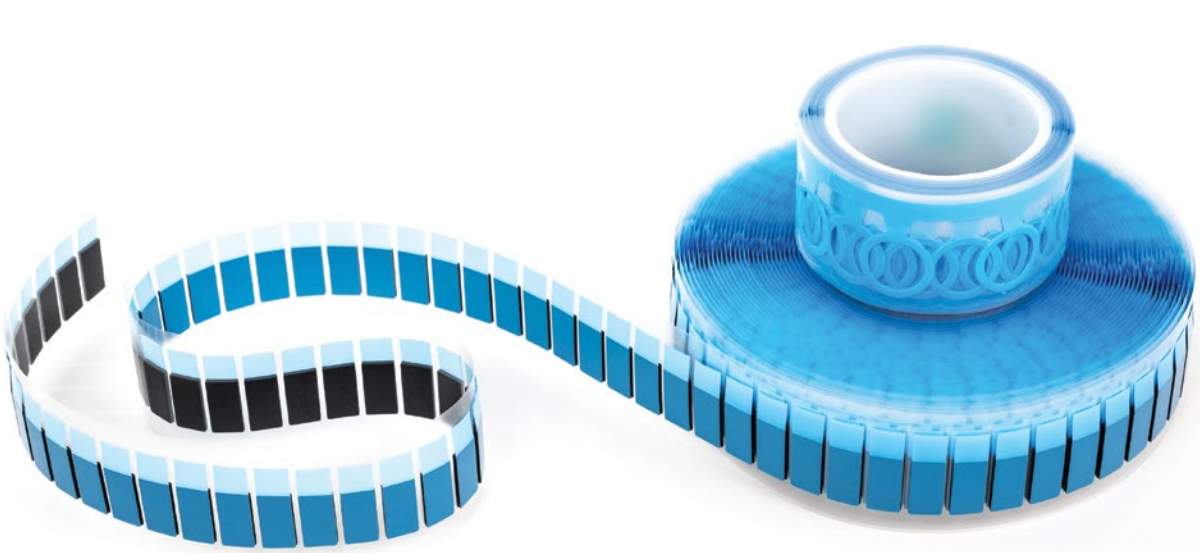
WHAT WE DO

CFS specializes in engineered adhesive solutions using a range of flexible substrates, foams, films, and bonding materials to create manufacturing-ready, die cut components tailored to your product's unique specifications. With decades of experience, we're a trusted partner to thousands of industrial companies, OEMs and their suppliers.



CAPABILITIES

INDUSTRIAL DIE CUTTING

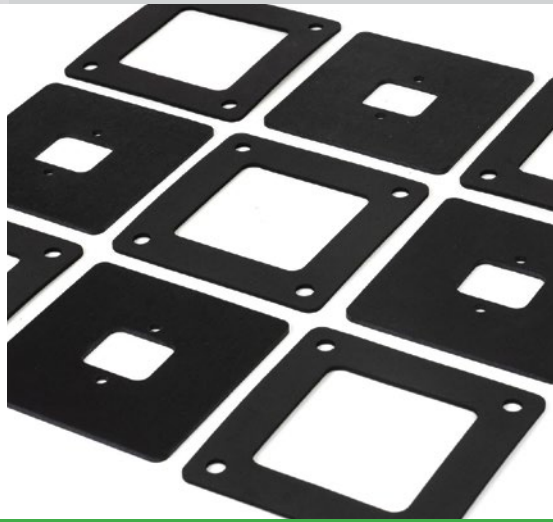
With multiple die cutting technologies, broad access to materials, and engineering support, we deliver scalable production, tight tolerances, and consistent results.

RAPID PROTOTYPING

Prototypes in less than 24 hours for complex gaskets, seals or die cuts, produced using 3D printing, custom plotting, or on our Flash machines, allowing you to test your product with confidence.

CUSTOM CONVERTING

Our value added services include die cutting, kiss cutting, laminating, perforating, slitting, and tabbing. An onsite ISO 7 clean room processes parts in a controlled environment.



WHY WORK WITH CFS?

ENGINEERING SUPPORT

In-house engineering support at CFS means we can manage your project from initial prototype to full-scale production, working with your team throughout the order lifecycle.

PRODUCT AVAILABILITY

Our large inventory of industrial adhesive tapes includes high temperature polyester, crepe tapes, VHB, and double-sided varieties, built to perform in a range of conditions and applications.

MATERIAL EXPERTISE

Access to and experience with converting a wide range of flexible substrates such as foams, films, tapes, and specialty bonding materials to produce your specific manufacturing-ready component.

INDUSTRY EXPERIENCE

With over 60 years of combined industry experience, we are trusted by leading manufacturers for our commitment to quality, extensive technical knowledge, reliability, and short lead times.
